                                                                                                                                                               SEQUENCE FROM N.A.

Wada M., Hisano T., Kuwano M.;

SEQUENCE (SEP-1999) to the EMBL/GenBank/DDBJ databases.

LI SUDMITTED (SEP-1999) to the EMBL/GenBank/DDBJ databases.

LI FUNCTION: BINDS IL-13 WITH A LOW AFFINITY. TOGETHER WITH IL-4R-ALPHA CAN FORM A FUNCTIONAL RECEPTOR FOR IL-13 ALSO SERVES AS AN ALTERNATE ACCESSORY PROTEIN TO THE COMMON CYTOKINE RECEPTOR GAMMA CHAIN FOR IL-4 SIGNALING, BUT CANNOT REPLACE THE FUNCTION OF GAMMA—CIN ALLOWING ENHANCED IL-2 BINDING ACTIVITY.

CIN SUBJECT IN TERLEUMEN-13 RECEPTOR IS A COMPLEX OF IL4R-ALPHA, ILJAR-ALPHA, AND POSSIBLY OTHER COMPONENTS.

CIN SUBJECTIVE IN LOCATION: TYPE I MEMBRANE PROTEIN.

CIN SUBJECTION: TYPE I MEMBRANE PROTEIN.

CIN SKELETAL MUSCLE AND OVARY: LOWEST LEVELS IN BRAIN, LUNG AND KIDNEY. ALSO FOUND IN B-CELLS. T-CELLS AND ENDOTHELIAL CELLS.

CIN SIMILARITY: CONTAINS I INMUNOGLOBULIN-LIKE C2-TYPE DOMAIN.

CIN SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Receptor; Transmembrane; Glycoprotein; Immunoglobulin domain; Signal. SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
BUSCASE: DEFECTS IN ILZRG ARE THE CAUSE OF A SEVERE COMBINED IMMUNODEFICIENCY, WHICH IS KNOWN AS AGAMMAGLOBULINEMIA, SWISS TYPE OR X-LIKKED SEVERE COMBIRED IMMUNODEFICIENCY DISEASE (XSCID).
SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE III-LIKE DOMAIN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A pescription: receptor for interleukin-2
A pathway: interleukin-2 stimulated growth and differentiation of T cells, B cells, N
C Superfamily: interleukin-2 receptor gamma chain
C; Superfamily: interleukin-2 receptor gamma chain
C; Seywords: cytokine receptor; duplication; glycoprotein; transmembrane protein
F; 1-22/Domain: signal sequence #status predicted <SIS>
F; 23-369/Product: interleukin-2 receptor gamma chain #status predicted <MAT>
F; 256-284/Domain: transmembrane #status predicted <TMM>
F; 256-284/Domain: glos/Binding site: carbohydrate (Asn) (covalent) #status predict
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             gene microdeletion demonstrates that canine X-linked severe combi

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
